# EURIDICE Newsletter April - July 2024

Dear EURIDICE friends and partners,

We are please to share with you the second issue of our Newsletter, updating on activities of the second quarter of the project period. We proudly mention the ongoing 2-weekly **online EURIDICE Digital Humanism lecture series,** organized by TU Wien's **Centre for AI and Machine Learning.** Meanwhile, curriculum development co-creative design is going on for the innovative European Joint Master *Digital Society, Social Innovation and Global Citizenship*, with emphasis on its innovative educational concept, the ***Collaboratorium***. Also, self-standing modules are being developed for professional and teacher training. Recently, a number of master students completed (or are now completing) their societally oriented Digital Society & Global Citizenship master projects in the framework of EURIDICE. They were the first participants in the pilot for the educational concept of the *Collaboratorium,* through their collaborative, interdisciplinary projects.

Please find a few highlights below, all past and future events can be found at **https://euridice.eu**

Digital Society & Global Citizenship collaboratorium group, Amsterdam, 1 July 2024

"Make the bot speak your language" Digital Society and Global Citizenship master project
By placing human-centered design at the forefront, this master research project by Marie-Lou David contributes to the broader discourse on technology's role in low resource environments. By working closely with stakeholder groups in food-insecure rural regions of West Africa, this research supports SDG-2: Zero hunger. Read more...

EURIDICE Digital Humanist Lecture by Elisabeth Hoffberger-Pippan *"Autonomous Weapon Systems, Recent conflicts show that AI has become ubiquitous in contemporary battlefields. What if AI is not used to support human decision-making, but to decide – without human intervention or oversight – who shall live and who shall die?"* Read more...

Digital Humanism Lecture "Civic Virtue and Digital" Technology by Wessel Reijers, online

Today a major technological trend is the increasing focus on the person, i.e. personalizing, customizing, tailoring the person in both beneficial and troubling ways. This trend is moving beyond the realm of commerce to the sphere of public governance, What these systems have in common is that they may target the person and hetr ethical and political dispositions, het virtues. TU Wien, online lecture, June 4. Read more…

A few upcoming EURIDICE events in 2024

3rd ACM Digital Humanism Summer School – TU Wien Vienna, Austria 2 – 6 September 2024 Digital

Humanism is an interdisciplinary field that examines the complex interplay between technology and humankind with the aim of creating a better society and improving our lives. It recognizes that an interdisciplinary approach is necessary, breaking down disciplinary silos and integrating humanities, social, technical, and engineering sciences. Globally recognized and leading academics from computer science, social sciences, and humanities will present and discuss these topics. Read more…
